

THE IMPACT OF PEDAGOGICAL IMAGE ON THE LEARNING PROCESS: PSYCHOLOGICAL AND METHODOLOGICAL APPROACHES

Saidova Ozoda Tohirovna

Independent Researcher, Tashkent State Pedagogical University

Annotation

This article analyzes the impact of the concept of pedagogical image on the educational process, examining its psychological and methodological aspects. Pedagogical image is a crucial factor associated with a teacher's personal qualities, pedagogical competencies, and methodological approaches. The research findings reveal the influence of pedagogical image on the effectiveness of education and highlight the necessary methods for its development.

Keywords: pedagogical image, learning process, psychological factors, methodological approaches, educational effectiveness.

Pedagogical image is one of the key factors ensuring a teacher's professional success in the modern education system. It is considered a set of evaluations and impressions formed by students, parents, colleagues, and society regarding the teacher. Pedagogical image is shaped not only by external appearance or speech culture but also by a teacher's professional skills, approach to students, and effectiveness in the educational process.

Modern pedagogical and psychological sciences emphasize the significance of various methodological and psychological approaches in the development of a teacher's image. A teacher's self-confidence, emotional stability, ability to use innovative technologies, and adherence to pedagogical ethics are essential components of pedagogical image. Research indicates that teachers with a strong pedagogical image positively influence students' motivation and the quality of education.

Furthermore, pedagogical image plays a crucial role in enhancing the effectiveness of the educational process, fostering students' interest in lessons, and developing

their independent thinking and creativity. Additionally, a teacher's image is vital for their professional growth and future career prospects. Therefore, the integration of psychological and methodological approaches is of great importance in shaping and developing pedagogical image.

This article examines the impact of pedagogical image on the learning process and explores ways to improve its effectiveness. It also presents key methodological and psychological approaches for the formation and development of pedagogical image.

The research findings indicate that the methodological aspects of pedagogical image have a significant impact on the effectiveness of the educational process:

Graph: Research findings on the methodological aspects of pedagogical image

The graph presented above reflects the research findings on the methodological aspects of pedagogical image. These data illustrate teachers' attitudes toward various methodological approaches aimed at enhancing the effectiveness of their pedagogical activities:

- **Individualized approach to students (85%)** has the highest rating, confirming that a personalized approach is the most effective factor in shaping a teacher's pedagogical image. Working individually with students helps increase their motivation and enhance their interest in the learning process.

- **Use of visual and technical tools (80%)** is also considered a significant factor. The integration of modern technologies and multimedia tools makes the learning process more engaging and comprehensible for students.
- **Innovative pedagogical technologies (78%)** is highly rated, highlighting the role of interactive and modern teaching methods in improving learning efficiency.
- **Improvement of the assessment system (72%)** has a relatively lower score but still positively influences pedagogical image. A fair and diagnostic-based assessment system contributes to enhancing a teacher's professional reputation.

The analysis indicates that **individualized approaches and the use of technological tools are the priority directions** in shaping and developing a strong pedagogical image. At the same time, **reforming the assessment system** is also a crucial factor in ensuring an effective educational process.

Ways to Develop and Strengthen Pedagogical Image

Implementation of professional development programs – Special programs should be designed to enhance teachers' pedagogical and methodological competencies.

Organization of interactive training and seminars – Regular workshops on innovative methodologies can contribute to the formation of a strong pedagogical image.

Development of pedagogical aesthetics – Teachers' speech culture, dress code, and adherence to professional etiquette positively influence their pedagogical image.

Conclusion

In summary, the impact of pedagogical image on the learning process is substantial, and its development contributes to improving the quality and effectiveness of education. A teacher's methodological expertise, ability to utilize innovative technologies, and individualized approach to students are key factors in shaping pedagogical image. Therefore, a systematic approach and continuous professional growth are essential for enhancing pedagogical image.
