In the world all in countries like, the population in Uzbekistan is between tuberculosis with of illness increase, disease fast developing, widespread, severe types, as well as of patients to drugs resistant from mycobacteria illnesses record is being done and is increasing. In our republic tuberculosis of the disease to spread inconvenient ecological situation, population socio-economic situation, population between migration, this including HIV infection and AIDS patients number increase reason. However, the last in years intense and wide in scope preventive and to the epidemic against of events and the DOTS strategy implementation to be done as a result illness, death indicators one until to stabilize and to decrease achieved.

Tuberculosis disease - people and animals for general contagious disease to be, the initiator tuberculosis mycobacteria is considered. disease often chronic delay to the feature has, it is especially lungs, skin, intestines, kidneys, bones, joints and other members injury possible. WHO tuberculosis socio-hygienic problem that attention take this infection epidemiology deep study and him/her step by step finish according to program working. This program is available for download. appropriate tuberculosis against struggle measures every one in the country epidemiological from the situation come came out without, scientific check to the results based on take to go need.

Tuberculosis medicine to the means durable shape in the world many in qualifications tuberculosis against effective in the fight difficulty giving birth and society health storage system for serious to the problem around Tuberculosis medicine to the means durable of forms spread level Eastern Europe and former union to the composition entered in the countries the most high is considered.

Uzbekistan The resolution of the Supreme Soviet of the Republic of Uzbekistan dated 17.10.2014 Republic tuberculosis against measure events improvement Order No. 383 of the Government of the Republic of Kazakhstan on execution control to

do and practical help to give on the surface the following to aunt increased. City and SEO and JSB specialists in the districts by population tuberculosis among prevent to take according to medicine associations with in cooperation additional plan working will be released and done implementation Every one disease SEO and JSB specialists in their fields phthysiologist, local patronage patronage nurses in the presence of epidemiological inquiry, disease in the ovens neutralization department experts by final and camera neutralization works take will go.

This planned affairs efficiency territories in the section in numbers expression enough If we are, Kokand in the city illness situation in 2024 compared to 2023 by 5.6 % decrease record 55 BK+ patients were included. organization arrived, of which 6 to be restored to health and return to the UK past.

Conclusion as this to say maybe this the disease spread prevent to take and to him/her against to fight against affairs systematic current Every one in the territories tuberculosis against of events quality DPM chief physicians by continuous to control taken from this outside this the disease to take for the purpose permanent accordingly in the neighborhoods population between and social on the networks sanitary propaganda works take is going.
