Currently, the head of the country is paying a lot of attention to the field of education. It is no coincidence that more than 60 percent of our state budget is allocated to education. We know that the future is in the hands of the youth. Taking this into account, our head of state considers the introduction of modern technologies into the field of education as one of the main tasks. Our opinion is also confirmed by the fact that there are no schools, academic lyceums, institutes, and universities in our country that have not yet received a modern computer.

Modernization of the field of education in this way is a great help in raising the level of knowledge of pupils and students. These days, educational processes are creating wide conditions for learning foreign languages. In particular, great conditions are being created for this issue by our head of state. For this purpose, a number of decisions and laws were adopted on this issue.

As proof of this, we can show the Decision "On measures to further improve the system of learning foreign languages" announced by our honorable president on December 10, 2012. In this Decision, training of the growing young generation as a mature specialist in accordance with the requirements of the time, further development of foreign language education is a particularly important profession as it is oriented towards noble goals. Today, at all stages of the education system, it is planned to introduce advanced methods of teaching using modern pedagogic and information and communication technologies, to further increase the interest of the young generation in foreign languages and, in turn, to fundamentally improve the system of training specialists who can speak these languages fluently, and at the

same time, to create conditions and opportunities for them to achieve the achievements of world civilization and widely use the world's information resources, to develop international cooperation and communication.

Effective use of modern information and communication technologies is important in consistent learning of foreign languages. Determining to what extent the level of knowledge of pupils and students can be considered as one of the most urgent issues. It is no secret to all of us that the role of modern testing programs is very important in checking the level of knowledge of pupils and students. Today, there are a number of modern checking programs, including MyTestX, Easy Quizzy, and iSpring QuizMaker, which have been successfully tested in experimental and research areas established in higher educational institutions of our republic. Therefore, it is no coincidence that every school, college, academic lyceum, institute and university are doing great work on making it possible to use modern checking programs such as MyTestStudent, Easy Quizzy, and iSpring QuizMaker.

It should be mentioned that the wider use of modern checking programs such as hu in the educational system will certainly help students and students in learning a foreign language. This is one of the most effective ways to improve the quality of the education system. Wider use of modern checking programs in the educational system will create more opportunities and convenience for teachers.

In particular, it has been a great help in solving the most urgent problems that arise before the teachers when they have information about the level of knowledge and worldview of the students and the students. Due to the wide range of opportunities available in modern testing programs, teachers are benefiting from such programs not only to check the knowledge levels of students and students through such modern testing programs, but also to further develop their worldview and logical thinking skills. In short, one of the most important factors in the development of the level of knowledge of the growing generations is the educational process organized in educational institutions. It is worth mentioning that in the above-mentioned decision, the requirements for equipping educational institutions with modern information and communication equipment, technical means and equipment of teaching have been put forward.

International Conference on Multidisciplinary Sciences and Educational Practices

Hosted online from Rome, Italy

Website: econfseries.com

27th November, 2025

The issue of equipping educational institutions with modern information communication, technical means and equipment of teaching is considered one of the most important and necessary tasks. It is no exaggeration to say that by developing the educational process, we once again laid solid bricks for the foundation of the future of our country.

Of course, the equipping of classrooms with modern computers and other technical equipment will greatly help young students to become interested in learning foreign languages and to learn foreign languages quickly and perfectly. This increases the quality of education in educational processes. That is why it is necessary to implement new innovative ideas and technologies such as modern testing programs in educational institutions. Only then will the educational processes be more qualitative and more perfect.
